

UPT-300 SE

"Tapping is an art of engineering..."

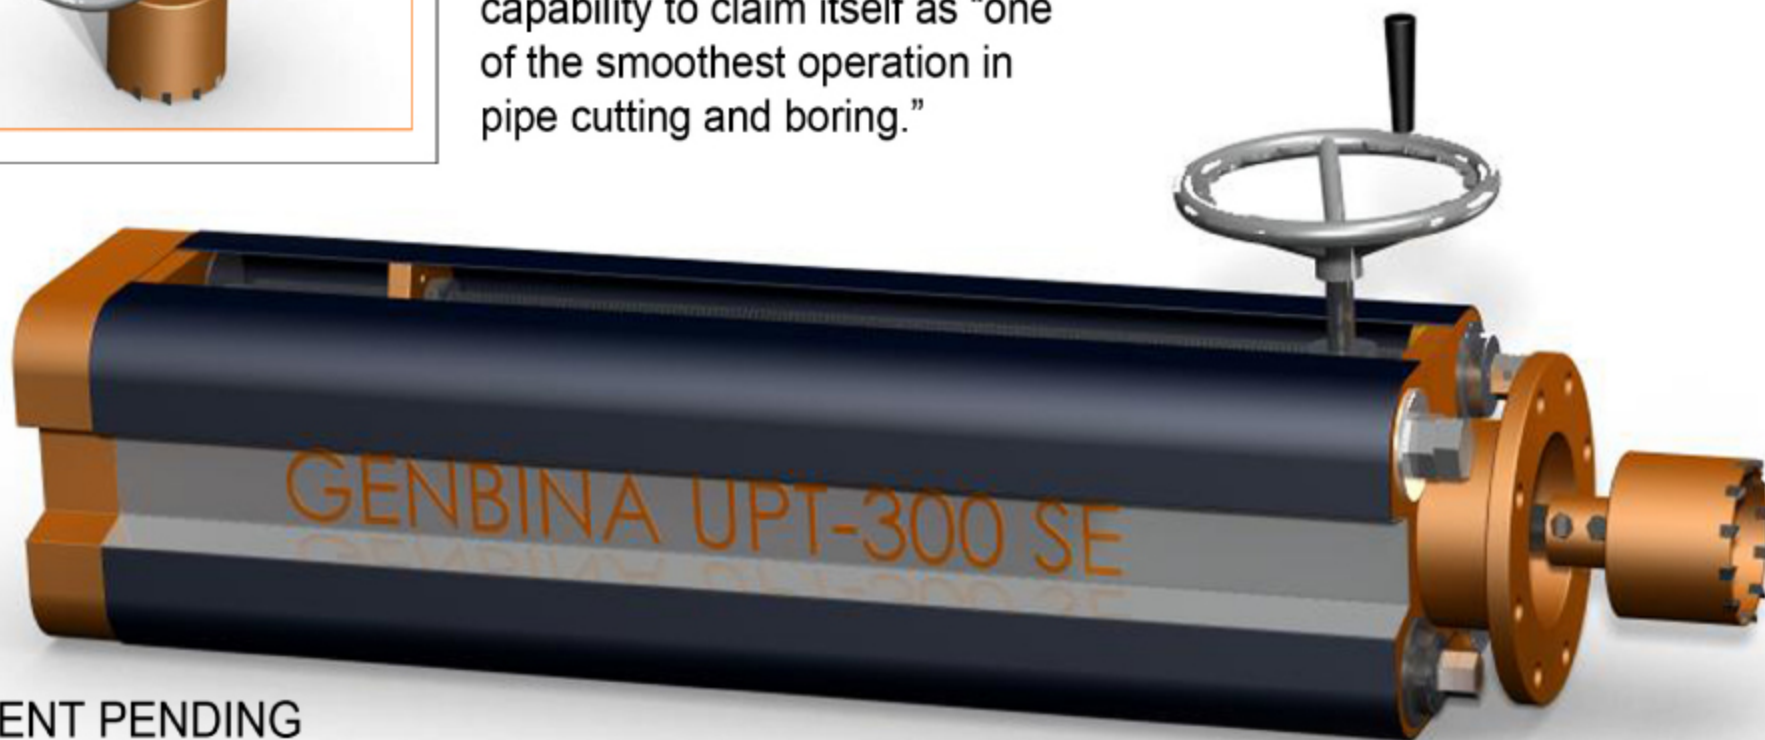

-Son Chung,
renown international designer
based in Toronto, Canada

UPT-300 SE gives you peace of mind by providing the most efficient tapping capability for 75mm to 300mm tapping diameter

The new 2009 UPT-300 SE is designed and engineered by Son Chung, an international icon in Industrial Design based in Toronto, CAN. The unique design of the UPT-300 SE is not measured by weight but by its engineering precision and capability to claim itself as "one of the smoothest operation in pipe cutting and boring."

Based on our experience and customer feedbacks, any equipment weight above 25kg is beyond the convenience of hoisting with bare hands at the site. Furthermore, Site Safety cannot be compromised and therefore proper hoisting and lifting devices is required, even for a "Lightweight" machine as claimed by our competitors. Lightweight means its not SOLID or ROBUST, so Tapping quality is questionable.
